

LF series seats

Sit in any DAF truck and you'll immediately sense the respect for the driver. All controls fall conveniently to hand and a supportive seat invites you to enjoy the drive.

DAF LF trucks are built to deliver in urban and regional distribution. The driver must manoeuvre through dense areas and frequently get in and out, so the seat is designed to be safe, durable and ergonomic.

Safety features such as integrated head restraints and three-point seatbelts not only conform to legal requirements, but also contribute to comfort and convenience.

A comfortable workplace

Much attention is paid to the dimensions, ergonomics and materials of the seats. Foam padding of various densities is carefully selected and combined to maximize support without introducing hard or soft spots. The shape allows optimum freedom of movement, while the velour fabric on the seat facings breathes, and is backed by a thick moisture-absorbing layer to keep the surface dry.

Optimal adjustability

The driver seat cushions are adjustable for longitudinal position and angle (excl. the fixed seat) to optimise upper leg comfort. All seats have

adjustable backrest angle. Together with the 210 mm longitudinal movement and 100 mm vertical movement of the complete seat assembly, a DAF LF seat easily accommodates drivers of all sizes. It is always possible to find the most comfortable driving position.

Dual mate seat

Also a dual mate seat is available. The dual mate seat has one 2-point and one 3-point safety belt and is available in 3 different executions.
